IN THE PACIFIC STATES**

**1:30-5:00pm**

*Cedar Room, 2nd Floor*

Organizers & Moderators: **Vaughn Walton** and **Amy Dreves**, Oregon State University, Corvallis, OR

**SUMMARY STATEMENT:** Spotted Wing Drosophila (Diptera: Drosophilidae; SWD) is an invasive pest that attacks Pacific Coast small and stone fruits including but not limited to blueberries, blackberries, grapes, strawberries, raspberries, cherries, apples and peaches. SWD is established throughout the west coast of the U.S., Canada, Florida and Hawaii. This pest caused significant economic damage to both fresh and processed fruit during 2008 and 2009. This symposium was organized to share current information and future management plans for this important pest in this region.

**SYMPOSIUM: BIOLOGICAL CONTROL AND IPM OF  
CEREAL LEAF BEETLE IN WESTERN NORTH AMERICA**

**1:30-5:00pm**

*Rapids Room, 3rd Floor*

Organizers & Moderators: **Barry Bai**, Oregon Department of Agriculture, and  
**Diana Roberts**, Washington State University Extension, Spokane/Lincoln Counties

**SUMMARY STATEMENT:** Cereal leaf beetle (CLB) expanded its distribution into western North America during the last two decades. Western states and Canadian provinces worked collaboratively to apply IPM technology, emphasizing biological control for this pest, ever since its detection in the Pacific Northwest. Parasitic wasps were reared, released and redistributed in cereal leaf beetle infested counties. Now biological controls are well established in most areas where CLB are found in the region. The western cereal leaf beetle team was awarded the IPM Team Award by PBESA at its 2009 annual meeting and also received the 2009 Multistate Team Award from the Western Extension Directors' Association. The purpose of this symposium is to showcase the achievements of the working group and to summarize the successful results of work conducted by collaborators.

## **“Economic Sustainability in the Evolving World: Implications for Agriculture and the Environment”**

**A Plenary Session Presentation by**

**Dr. Steven C. Blank  
Agricultural Economist  
University of California, Davis**

Both natural and social scientists have been focusing much attention on a new issue over recent years: “sustainability.” In American agriculture, the discussion became more intense in 1990 when Congress passed a “Farm Bill” that defined “sustainable agriculture.” Parts of that definition included the requirements of “economic viability” and enhanced environmental quality for true, long-run sustainability, thus linking the work of social and natural scientists in the quest for a production system that will serve both present and future generations. This presentation will summarize the evolution of agriculture to its current competition with environmental issues and suggest how this conflict might be turned into a complementary coexistence. American agriculture’s current struggle for profitability is shown to be a driver of the conflict, whereas growing public concerns for environmental issues offer an opportunity for social and natural scientists to jointly derive a sustainable solution.

**5:00-6:00pm**

**Cedar Room (2nd Floor)**
